

AVT-4714 Distribution Amplifier provides four identical Composite Video and Stereo Audio outputs from a single Composite Video and Stereo Audio input. The input signal is amplified and distributed via its internal circuitry to insure that all four video and audio outputs are of identical quality to the input signal. A video/audio source, such as a VCR, Camcorder or DVD Player can now be fed to multiple devices, such as TV Sets or VCR's without signal degradation.

#### **AVT-4714 Features and Specs**

- 1 Composite Video Input via RCA connectors
- 1 Stereo Audio Inputs via RCA connectors
- 4 Composite Video Outputs via RCA connectors
- 4 Stereo Audio Outputs via RCA connectors
- Video Bandwidth: >8MHz
- Audio Bandwidth: >20KHz
- NTSC and PAL compatible
- External 115VAC to 15VDC Power Supply Included
- One-Year Limited Warranty
