

VGA-201P VGA Multiplier provides two identical VGA, SVGA or XGA (resolutions up to 1600x1200) outputs from a single input. The input signal is amplified and distributed via its internal circuitry to insure that both outputs are of identical quality to the input signal. This small unit, weighing under 4 ounces, is truly portable because it gets its power from the computer's keyboard connector via a Y-cable assembly that is provided. This means no external power supply! Now it's easy and inexpensive to feed two computer monitors from the same PC or Laptop.

#### **VGA-201P Features and Specs**
