Thanks for purchasing HDMI AV Matrix Extender (Transmitter, Receiver and Video Wall Receiver). With our highly reliable and quality product, you can enjoy countless benefits by using this KVM Extender.

Introduction

The HDMI AV Matrix Extender comprises three distinct units, the Transmitter, Receiver and Video Wall Receiver. It is a LAN based KVM Extender system and allowed accessing a computer from a remote console anywhere on your existing network infrastructure. Keyboard, mouse, USB 2.0 devices, audio and video can be extended away from your local PC or source by using single Cat5 cable transmission. For convenience of control, the IR is built-in and the connected AV device can be remote from either end of connection. In additional, RS232/UART extension is supported as well.

Note: In case of to extend another 100M range, it needs to install the Gigabit Network Switch.

Features

Support direct connection of 100M/330ft with Gigabit Ethernet Switch 2 x USB 2.0 port over IP extension Support Digital Video resolution of 1920x1200 @60Hz Bi-directional IR pass-through for added convenience Complaint to HDMI 1.3 CEC specification Support 7.1 audio channel Support A/V Matrix up to 256x256 (HX120T/HX120R Combo) Support RS232/UART Extension function Support 8x8 Video Wall (HX120T/HX120W Combo)

| No. | Item | Description |
|-----|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Reset | Press to re-start the unit. |
| 2 | Connect | Press to re-connect the Transmitter/Receiver if the DIP switch has been reset. |
| 3 | Devices | Press to connect the device which plugged into Receiver's USB port to console. |
| | | Note: Please check the Devices indicator (No. 8) after USB device has been plugged in to the unit. No device will be found if the Device indicator (No. 8) lights off. If it happens, press this button to light it up and re-connect. |
| | | Note 2: Skip this step if the device you have plugged is a USB keyboard or mouse. |
| | | Press to update the EDID of connected monitor. To update the EDID, remove the Receiver's power. Hold the device button and then power on the unit. Release the Device button when the Power indicator flashes. |
| 4 | IR receiver | Connect to a IR receiver. |
| 5 | IR Emitter | Connect to a IR emitter. |
| 6 | DIP switch | 4-position dip switch for pairing with Transmitter and Receiver. |
| 7 | Video indicator | Lights when video is transferring. |
| 8 | Devices indicator | Lights when the device is connected to console (Devices button is pressed). |
| 9 | Power indicator | Lights when power is on. |
| 10 | Power jack | Connect to the power adapter. |
| 11 | RS232 male connector | Connect to RS232 device. |
| 12 | HDMI Output | Connect to a display device. |
| 13 | USB Type-A connector | Connect to USB devices. |
| 14 | RJ45 connector | Connect to Transmitter/Receiver. |
| 15 | RS232 female connector | Connect to a host PC. |
| 16 | HDMI input | Connect to a video source/PC. |
| 17 | USB Type-B connector | Connect to a host PC. |

Connection

Before connecting the HDMI AV Matrix Extender with an Ethernet Hub/Switch, please read the notices mentioned below

- 1. When grouping the network of HDMI AV matrix Extender/Video wall, a Gigabit Ethernet Hub/Switch is necessary due to the requirement of bandwidth. The required bandwidth for each channel may up to 200mb/sec. To ensure the better quality of transmission, a reputable name brand hub/switch is recommended.
- 2. Gigabit Ethernet Switch/HUB with feature of Jumbo Frame is required, other specs like IGMP Snooping, IGMP Querier, IGMP v2 and IGMP Fast Leave are strongly recommended. If more than one transmitter connects to the same network segment without support of IGMP Querier by Switch/Hub, the HDMI AV Matrix Extender may work incorrectly. For more setting details of these functions, refer to the Hub/Switch's instruction manual.

Note: The diagrams below are examples, the actual applications may vary.

Connecting the local unit (Transmitter)

- ① Connect the power adapter to a wall outlet.
- 2 Connect a video source to HDMI input of Transmitter using a HDMI cable.
- 3 Connect a computer to USB type B connector of Transmitter using a USB cable.

Connecting the remote unit (Receiver)

- ① Connect the power adapter to a wall outlet.
- **2** Connect a display to HDMI output of Receiver using a HDMI cable.
- 3 Connect a USB device to USB type A connector of Receiver using a USB cable.

Connecting the local (Transmitter) and remote (Receiver) unit Point to point

To connect the Transmitter and Receiver, simply connect both units using CATx cable directly and the distance can be extended up to 100m.

Alternatively, the Receiver can be extended another 100m using a Gigabit Ethernet hub (not included).

Point to multipoint

Except the point to point connection, the Transmitter can be extended to several Receivers using a gigabit Ethernet switch.

Video Wall

With the combination of Transmitter and Video Wall, the HDMI signal can be sent to one or multi HDMI display up to 8x8 using a single Cat5 cable.

Matrix connection

The HDMI AV Matrix Extender provides varied and flexible extension for diversity requirements. The display of A/V sources or PC can be mixed with matrix switch function through the pair of the Transmitters and Receivers in the same channel. User can extend the matrix switch up to 16x16 works with a Ethernet Gigabit Switch/Hub. Please refer to the illustrations below for the connection diagram.

Note:

- For the better performance of video and matrix display, using the same brand, size and model monitors are strongly recommended.
- The lag of displays may occur sometimes. The image quality is depending on the speed of network or the equipments, such as the grade of hub.

Bi-directional IR connection

The HDMI AV Matrix Extender provides bi-directional IR extension between the transmitter and receiver over the CATx cable. Place the IR receiver near the sender unit, such as a remote control, and the other end to the jack of **IR RECEIVER** (remote or local unit of HDMI AV Matrix Extender). Place the IR Emitter to somewhere face the IR receiver of A/V source, and the other end to the jack of **IR EMITTER** (remote or local unit of HDMI at the terms of HDMI AV Matrix Extender). The IR signal can be transmitted forward or backward. Refer to the illustration below to outline the connection of transmitter and receiver.

Caution: Plug the IR Receiver and IR Emitter into the respective jacks, otherwise the IR sensor on the IR Receiver and IR Emitter will be invalid.

Remote control HDMI CEC remote

CEC (Consumer Electronics Control) is one of features of HDMI that allows HDMI devices to control each other using only one remote control. To achieve the HDMI CEC remote by the HDMI AV Matrix Extender, please refer to the notes below.

- 1. Make sure the connected AV equipments and TV/monitors are compatible with HDMI CEC.
- 2. The name of HDMI CEC (for example, Bravia sync control, VieraLink, Kuro Link, Aquos Link, etc.) and operating settings may vary depending on the brands of AV equipment. For more details, please refer to the corresponding instruction manual.
- 3. Connect to a Gigabit Ethernet hub (not included) between Transmitter and Extender Receiver/ VideoWall Receiver if extending the distance.

Remote control (optional)

If CEC is not supported by the connected devices, please follow the steps below to remote.

- 1. Set a desired display mode (1 to 1, matrix or video wall).
- 2. Connect to a Gigabit Ethernet hub (not included) between Transmitter and Extender Receiver/ VideoWall Receiver if setting to matrix or video wall mode.
- 3. Place the IR Receiver to a desired location, and plug the other end of connector into **IR RECEIVER** jack of Extender Receiver/VideoWall Receiver.

RS-232 control

The HDMI AV Matrix Extender not only extends HDMI signal but also RS-232, and allows user to control from local PC remotely.

Connect the RS232 connector to a PC, and plug the other end of connector into the female connector of Transmitter.

- Connect the Transmitter and Receiver using Cat5 cable. Alternatively, the Receiver can be extended another 100m using a Gigabit Ethernet hub (not included).
- Connect the RS-232 connector to a RS-232 device, and plug the other end of connector into the male connector of Receiver.

Operation

To operate the HDMI AV Matrix Extender, two ways are provided.

- 1. Operate by adjusting the DIP manually.
- 2. Setup from web user interface.

Control manually

With the convenient push button and DIP Switch on the front panel, user can quickly and easily to operate the HDMI AV Matrix Extender directly. Please follow the steps below to setup.

- 1. Follow the previous chapter (**Connection**) to connect all devices according to your desired mode.
- 2. Adjust the DIP switches of transmitter and receiver/Video to the same positions.
- 3. Power the transmitter, Extender Receiver/VideoWall Receiver and AV devices/computers to on.

Note: Press the **CONNECT** button on the front panel of unit once the DIP switch has been adjusted.

Setup from web user interface

IP detection

- 1. Adjust the DIP switch of Transmitter and Receiver to the same position.
- Group the Transmitter and Extender Receiver/ VideoWall Receiver units to a network with a PC. The actual connection may vary depending on requirements. For more connection details, refer to the **Connection** chapter.
- 3. Turn on the power of all connected devices.
- 4. Insert the bundled CD/DVD into CD/DVD ROM, Find and double click the "Bonjour Browser" from the bundled CD/DVD after completing the steps above.
- Click Web Server (HTTP) to detect all the connected Transmitter and Extender Receiver/ VideoWall Receiver units.

6. Enter the IP address which detected from Bonjour Browser into a web browser.

| Services | Name | IP Address |

Alternatively, remove the Cat5 cable from the unit you wish to know the IP, and then re-connect to the unit. The screen will re-detect the input source and show the IP information before the image source appears.

Identify the unit

The naming rule of these units is based on the MAC address which labeled on the bottom of the devices. For example, if the MAC address of Transmitter is 00:11:AA:CB:00:01, the device will be named to HX120T-CB0001. T is for Transmitter, R is for Receiver and W is for Video Wall.

IP address assignment

If the PC cannot access the Transmitter and Extender Receiver/VideoWall Receiver using web UI, please follow the steps below to join the PC to the network.

Note: The example shown here is using Windows 7. For other operating systems, please refer to the respective user guides.

 Click Control Panel to bring up Adjust your computer's settings window, and then click Network and Internet item.

Pairing the Transmitter and Receiver

- When grouping the network of HDMI AV Matrix Extender/Video Wall using multipoint to multipoint, the channel selections may be complicated. This option allows user to select the channel more intuitively. User can click the desired channel on the web oriented user interface directly.
- Click **Apply** after selecting the desired channel.
- The channels may vary, it depends on the number of connected Transmitters.
- If the option of Save channel select has been ticked, the channel will be saved and based on the selection of web page, even the settings of DIP switch are different between Transmitter and Receiver.
- If the option of Save channel select has not been ticked, the channel will be switched to the selection. Note that this selected channel will not be saved once the power is unplugged. The actual connected channel is depending on the DIP switch when the power is re-plugged.
- Reload the channels in the browser once the connection of Transmitter is changed.

| | Serial over IP | Baudrate setting | Setup the baudrate settings. | | |
| | Miscellaneous Settings | Enable Channel OSD display | Enable the display of channel number after the video connection has been established. The channel number will be shown on the upper-left of screen for a few seconds. | | |
| | | Turn Off Screen When No Video Input | Enable the monitor into standby mode. If there is no video input from transmitter to receiver, the receiver will trigger the monitor into standby mode. | | |

EDID configuration

- To copy the EDID information, tick the option of **Copy EDID from this Video Output**. The EDID information will be copied each time power on the Receiver.
- Click the **Apply** after ticking/unticking the **Copy EDID from this Video Output**.

Baudrate settings

This option allows to set the baudrate of Transmitter, Extender Receiver/VideoWall Receiver manually. Make sure the settings must match with the RS-232 device you have connected. By default, the system settings are as following:

Baudrate: 115200 Data bits: 8 Parity: None Stop bits: 1

■ Click the **Apply** once the baudrate settings have been changed. OSD control

Two OSD control are provided, both operations are almost the same. One is using the remote control (optional), and the other is through HDMI CEC. For more operations, refer to the description below.

Remote control (optional)

The description below is an example for switching between different channels. The operation may vary depending on actual usage and connection. Before using the function of remote control, refer to the chapter of Connection - Remote control to set the desired display mode (1 to 1, matrix or video wall).

Remote controller

- 1. Numeric buttons*
- 2. MENU button
- **3. Cursor and OK buttons:** Cursor buttons: Move the cursor up, down, right, and left. OK: Confirm the selection.
- 4. BACK button: Return to the upper page.
- 5. CH UP*: Tunes up one channel.
- 6. CH DOWN*: Tunes down one channel.
- * These functions are available depending on the models.

Basic operation

1. Press Menu button to bring up the device ID.

- 2. The device ID will appear on the screen. To specify the desired device, press **Left** or **Right** button. Once the device has been confirmed, press **OK** to bring up more options.
- 3. Select Select Channel, and then press OK.
- 4. The available sources will be listed on the screen. Press **Up** or **Down** button to select the desired source, and then press **OK**.
- 5. The screen will display to the new source you have selected.

Additional options

- Select Scan node to refresh if more devices have been connected.
- Select **About** to show the firmware version.

HDMI CEC

Except the remote control (optional), remote the device through HDMI CEC is supported as well. The operation is similar with the remote control described above. Note that the definition of **Menu** button on the remote control and name of HDMI CEC may vary (for example, Bravia sync control, VieraLink, Kuro Link, Aquos Link, etc.). For more details, please refer to the corresponding instruction manual or manufacturer.

Technical support

Please contact with your local distributor for more information or technical support.

FCC / CE Statements

FCC Statement : This equipment has been tested and found to comply with the regulations for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with this User Guide, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case, the user will be required to correct the interference at his/her own expense.

CE Statement : This is a Class B product in a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.
