DISCOVER HOW THE SHAREBOX EXTENDS YOUR NETWORK!

Easily share your media on your network!

Do you always have your pc turned on, downloading torrents, serving your network files, or streaming music to your iTunes™ enabled device? If so, the Eminent Sharebox is the perfect solution for you! Simply add a 3.5" disk of your choice, and you're ready to go! The Sharebox has a built-in webpage that lets you select your shares and choose torrents to download. You can easily manage ftp users and groups. Shares that you add instantly become visible in the network, so that other networked pc's can access them. Torrents are downloaded quickly and stored in a selectable (shared) folder. In this way you and others on your LAN can easily access them. It is no longer necessary to copy all those MP3's to memory cards, CD-rom or other pc's. Now you can just drop them into the central managed iTunes folder of the Sharebox and access them everywhere in your network! Thanks to the high-speed cpu, you can now enjoy high-speed LAN transfer speeds. Are you looking for an easy way to add more storage to your network? Do you need a central location for storing your media or downloads? The Eminent Sharebox is the right choice for you!
